The pch app for iphone

To paraphrase Peter Griffin, apps make-a da world go round, and what's the point of having an iPhone if you're not going to load it with interesting and useful apps? Free apps are the best, but sometimes you can't get the features or fun you're looking for without paying for a little dough. Here are the highest paid apps for iPhone! My criteria for apps on this list Since these are the highest paid apps for iPhone, I decided to include apps that you have to pay for in advance or apps that might be free to download, but a subscription is needed or their functionality is greatly improved by making a purchase in the app or buying the paid version. I've also eliminated iOS apps that might be totally awesome, but are better suited to the iPad (music instrument apps, writing apps, etc.). Here we go! Plex OK, so we start with an app that you don't actually have to pay to download, but it's better if you pay to use it, making it a paid app for me, and easily one of the best around. The Plex multimedia server is a way for you to enjoy all your home media without having to be constantly plugged into a hard drive. You just need the free Plex software on your computer, then the app, and you can enjoy all your favorite movies, TV shows, music videos, whatever, all your devices - all you need is an internet connection. The beauty of Plex is just that - it's elegant. The app organizes all your media for you and even adds rich descriptions, illustrations, and more, giving everything a complete and finished feel (not like your first iPod Touch where you couldn't be bothered to find album artwork, so you just have thousands of songs go through with white backgrounds featuring those eighth notes). The paid Plex Pass lets you download even more content to your server; Show trailers and movie extras in your libraries (special features and what isn't); Set up a home for your family (which allows you to switch from one account to another and use parental controls and restrictions on certain content); enable all of Plex's mobile apps on all devices and platforms simply by logging into your account in the app; and a whole bunch more! If you have a large media library and hate lugging a hard drive (or five) or if you like to watch and listen to your stuff on the road, then Plex is perfect for you. Free to download, Plex Pass is \$4.99 per month, \$39.99 per year, or \$ for a lifetime subscription - Download now 1Password 1Password is yet another application that is free to download, but you will eventually need to pay to continue using it (the download gives you a free 30-day trial). This is your one-stop shop and allows you to store passwords for just about every account in your life, helping you change them randomly, making them stronger - all you have to remember is your 1Password password! 1Password is not just a stellar password management application; it can also house credit card numbers, addresses - really any information you think sensitive can be locked in very clean vault for your eyes only. The app works with TouchID, which makes it even safer, allowing only those with your fingerprints to enter (i.e., you, duh). There is also an Apple Watch app, which lets you decide what information you want to quickly access on your watch, and the small screen makes it ideal! Free to download; The 1Password subscription is \$2.99 per month, billed annually; 1Password Families is \$4.99 per month, billed annually - Download now Fantastical 2 There are calendar apps and there are calendar applications, and then there are Fantastical 2. First of all, it's beautiful; it looks great. It has a nice interface that is easy to read and follow, and it is fast. That's all Fantastica's interest. Second, it has cool features, like parsing natural language, reminders, an extended keyboard when creating new events or reminders (you have no idea how useful it is until you use it!), and much more. One of the coolest features is the natural language parser, which allows you to simply type in a sentence, like romantic dinner with René on Friday at 8pm and then automatically transforms into a calendar event, reminding you of the day. If you have a crazy busy schedule and not much time to enter events in a regimented mansion, then Fantastical 2 will save you a ton of time. This is basically a written calendar/recall version of Siri! Don at Tom's Guide also thinks Fantastical 2 is worth your moolah, say it takes your standard calendar app that comes with iOS and offers better features on all fronts. Enlightenment I couldn't make a better post applications without one for photo fanatics or Cella would have my skin. Enlightenment is SO. Cool. It was selected as App Store App of the Year in eight countries, including Canada, huh, and it was app of the year finalist in the U.S., and it's still great two years later! Enlightenment is the photo editing app of your dreams, combining the features of many applications into one gorgeous interface, allowing you total control over color, tone, details, masking, and a whole host of sweet effects (like mixing and describing - you can create seriously neat crap). You can transform photos-then images to look like graffiti or pencil sketches, and you can overlay photos, change specific objects in them, correct overexposure and much more, like tons. Enlightenment is basically Photoshop hipster for your iPhone - but in a totally awesome way. If you like post-production that goes along with photography, then definitely Enlightenment. Scanner Pro If you like to take your documents with you or if you need to send a lot of them and don't have time to dig this old device they call a fax, then Scanner Pro has covered you in a great way. It allows you to take pictures of documents with your iPhone, then save them in PDF, and it even automatically recognizes the specific types of documents, cropping them accordingly. You can then download your scans directly to your favorite cloud storage app. It's just tipping The Iceberg. Scanner Pro also lets you share everything you scan, and it can turn text into text images that you can select and copy, while recognizing 21 languages. You can even edit your scans, and each change is recalled, so you can reverse and reverse or repeat the changes as you please. There is also an iMessage extension that allows you to take and edit photos of documents directly in the Messages app. It's all about workflow, baby! If you regularly process physical documents and need a quick, easy and reliable way to scan and share them, Pro scanner is the only way to go (and not just because it rhymes). V for Wikipedia I would never have known about this application if it wasn't for TechRadar, and I'm sure I found it. Be real - you're going to use Wikipedia anyway, so why not have it all in a convenient and really pretty app - easily the most stylish Wikipedia app for iPhone at that. V (formerly Viki) did the best of the App Store of 2016 because it's not enough to give you information - it helps you learn more about where you live! The nearby Place feature lets you learn more about local monuments and areas, and you can explore the rest of the world using the app map. The most read Articles section lets you see what other people are watching, and the search is the complete Wikipedia experience (not like when searching in the YouTube app would bring different results that you will get online - remember that garbage?). Why pay for a Wikipedia app? Because V is more elegant and elegant than Wikipedia's web interface; it can help you learn more about your part of the world and it's more than Wikipedia at face value - it takes all the benefits of Wikipedia and gives them practical applications. (Although not optimized for the iPhone X, V made the list because it really is the best Wikipedia player available for iOS.) Sky Guide AR Sky Guide AR is an augmented reality app that shows you a map of the sky and talks to you damn close to everything you can see and tons of things you can't. It's the perfect companion for your new iPhone X, so you can enjoy all that ARKit goodness and graphic power. You calibrate the app, usually finding where the Sun or Moon happen to be, and then move your iPhone around to figure out what constellation is who, what planet is out there, and what the names of random stars are. If you're really jonesing to see a planet or a constellation you can search for it, or the app has a list of Sky Guide settings to let you know what celestial events you'll see that night and what time. The included Apple Watch app will even give you a quick overview of what you can see at any given time. If you're at all curious about the night sky or if you're looking for yourself in an endless view of corporate, Instagram dinners, and this useless masquerade we call life, then definitely check out Sky Guide AR. No, you don't have to be so dramatic to enjoy it. Enjoy. Adventure There is no endless runner quite like Alto's Adventure. In this side scrolling adventure, you play as Alto, a boy in the mountains whose llamas have escaped. On a snowboard, you have to chase them through the countryside, collect them for points. You also have to dodge obstacles and do tricks for points. But this is not the main draw for Alto's Adventure. This absolutely gorgeous game is all about the ambience and beauty of the wilderness in the game. The score is absolutely delicious and the colors and landscapes are charming. If you hate endless runners, then this is the one that could knock you down, as it's easily one of the most relaxing gaming experiences around. I can't recommend this game enough. Deliveries If you run a small business or if you happen to ship and receive many parcels, then you need deliveries. This is a complete tracker that compiles all your deliveries for you and gives you information about them individually, including shipping updates and where they are on a map. Deliveries let you know which company ships your parcels, so you can check the company's website and learn more about them. You can share shipping information via email or via the iMessage app, and there's even an Apple Watch app to help you keep track on the road, yes, you could run to each sender's website and check your tracking for free, but why, when deliveries make it so easy and convenient? If you're looking for additional package tracking options, Lory Gil has a few more favorites! METEO CAROTTE If the iOS weather app doesn't quite do it for you, CARROT Weather is one of the best weather apps you can get, period. It has a fantastic search interface that is both fun and informative, and it provides complete details about your daily time. It's the rain forecasts are second to none and the backgrounds that change with the weather make every day a bit of a surprise. Like CARROT Fit, Weather also has a fun personality, which you can set to Overkill, and get the crassest weather updates you've ever received in your life. With iOS 11, you also get an AR setting, showcasing the awesome power of the nascent ARKit. Minecraft The craft sensation is far from losing steam, and with more than half a million ratings in the App Store, Minecraft still maintains a rating of 4.5 stars. And why wouldn't he? It's the Seinfeld of video games; it's nothing and that's what makes it so fun. Mine and fodder for Build your world as you see fit; Raising animals handmade weapons; take charge of someone else's sweet castles; possibilities are limited only by your imagination. Explore and create. Create and explore. Or you can play in survival modes and just make weapons and fortresses to defend yourself against bloodthirsty mobs. (Although not optimized for the iPhone X, Minecraft made the list because it's very likely that an update is coming, and it's friggin' Minecraft.) Why did the money disappear? What's the best app you've ever paid for? the app you bought, but regret the most? Let us know in the comments below! Update November 2017: Updated for iPhone X. Swapped SkyView for Sky Guide AR because AR, and added Minecraft because MINECRAFT! Also updated prices for everything. We can earn a commission for purchases using our links. Find out more. More.
